BW/02-04

MONTHLY WHOLESALE TRADE: SALES AND INVENTORIES APRIL 2002

Sales. April 2002 sales of merchant wholesalers, after adjustment for seasonal variations and trading-day differences but not for price changes, were \$228.5 billion, up 1.6 percent (+/-0.5%) from the revised March level, and were up 0.2 percent (+/-1.5%) from the April 2001 level. The March preliminary estimate was revised upward \$0.3 billion or 0.1 percent. April sales of durable goods increased 1.8 percent (+/-0.8%) from last month, but were 1.9 percent (+/-2.4%) below a year ago. Compared to last month, sales of metals and minerals, except petroleum increased 7.4 percent and motor vehicle and motor vehicle parts and supplies increased 2.7 percent. April sales of nondurable goods increased 1.4 percent (+/-0.7%) from March, and were up 2.2 percent (+/-1.8%) from last year. Sales of petroleum and petroleum products increased 7.9 percent from last month, while chemicals and allied products grew 4.8 percent.

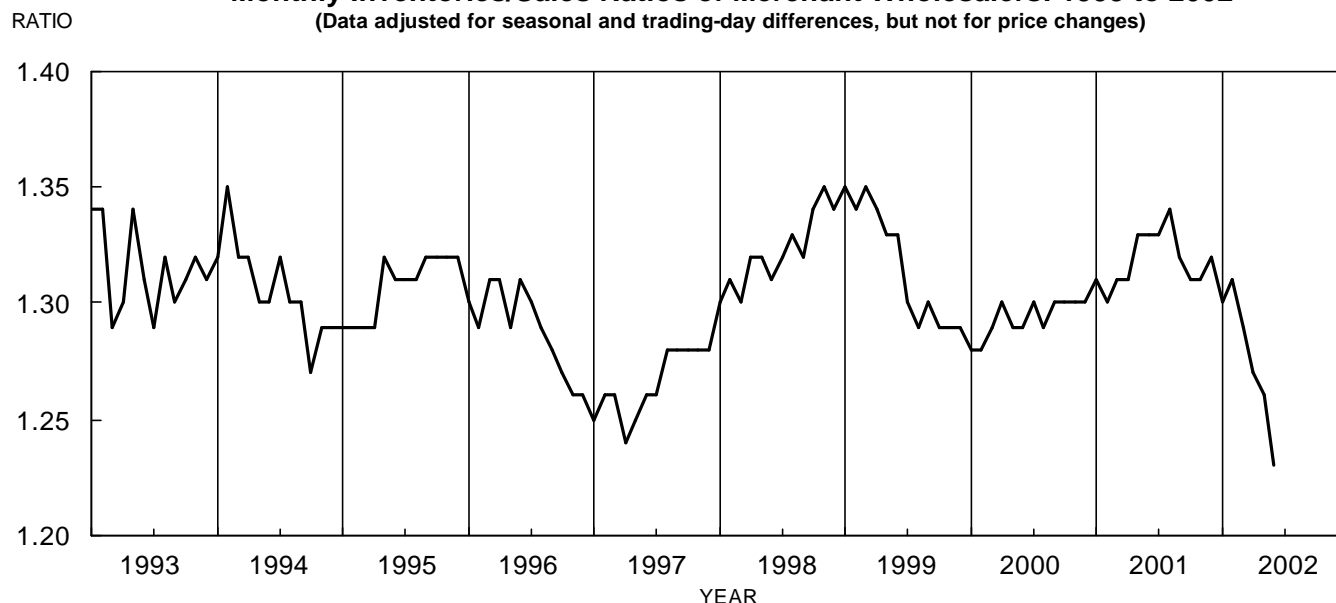

Inventories. Total inventories of merchant wholesalers, after adjustment for seasonal variations but not for price changes, were \$281.8 billion at the end of April, down 0.7 percent (+/-0.3%) from last month, and were down 7.0 percent (+/-2.3%) from a year ago. The March preliminary estimate was revised downward \$0.7 billion

or 0.3 percent. End-of-month inventories of durable goods were down 0.6 percent (+/-0.4%) from March and were 11.4 percent (+/-2.0%) below last April. Compared to last month, inventories of motor vehicle and motor vehicle parts and supplies decreased 2.0 percent and computer and computer peripheral equipment and software declined 1.2 percent. End-of-month inventories of nondurable goods decreased 0.9 percent (+/-0.6%) from last month, but were up 0.6 percent (+/-4.6%) from a year ago. Among nondurable goods, inventories of apparel, piece goods, and notions were down 3.0 percent from last month and farm product raw materials decreased 2.1 percent.

Inventories/Sales Ratio. The April inventories/sales ratio for merchant wholesalers, based on seasonally adjusted data, was 1.23. The April 2001 ratio was 1.33.

Data in this report are based on a sample and, therefore, are subject to sampling and nonsampling variability. A discussion of the reliability of the data and general survey methodology appears in BW/01-A Current Business Reports.

Monthly Inventories/Sales Ratios of Merchant Wholesalers: 1993 to 2002 (Data adjusted for seasonal and trading-day differences, but not for price changes)

Monthly Wholesale Trade for May is scheduled to be released July 10, 2002 at 10:00 a.m.

Address inquiries concerning this report to Service Sector Statistics Division, U.S. Census Bureau, Washington, DC 20233, or call Scott Scheleuer, (301) 457-2747 or (301) 457-2764. For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

This report is available on day of issue through the Department of Commerce's online Economic Bulletin Board (202-482-1986). The data are also available on the internet - <http://www.census.gov/svsd/www/mwts.html>.

Note: Medians are based on data from the latest 12 months.

Reliability of Estimates

There are two types of errors possible in an estimate based on a sample survey: sampling and nonsampling.

Sampling errors occur because observations are made on a sample, not on the entire population, and different samples could have led to different estimates. Standard errors and coefficients of variation, as calculated for this report, are measures of sampling variation. The margin of sampling error, as used on page 1, gives a range about the estimate which is a 90% confidence interval. If, for example, the trend estimate is up 1.2% and the standard error is 0.9%, then the margin of sampling error is $\pm 1.65 \times 0.9\%$ or $\pm 1.5\%$, and the 90% confidence interval is -0.3% to +2.7%. If the interval contains 0, it is uncertain whether there was an increase or decrease. For monthly level, the coefficient of variation (CV) is given. The resulting confidence interval is the estimated value $\pm 1.65 \times CV \times$ (the estimated value).

Nonsampling errors can occur because of nonresponse,

insufficient coverage of the universe of wholesale businesses, mistakes in the recording and coding of data, and response errors. Imputed data accounts for approximately 28% of the sales estimates and 31% of the inventories estimates. Additionally, estimates of sales and inventories prior to March 2001 have been restated from SIC-based estimates. The restatement methodology may have introduced additional nonsampling error. The calculated median standard errors of year-to-year change estimates may also be influenced by the methodology used to impute historical data for units in the NAICS sample. The effect of this historic imputation methodology on published estimates will decrease as more data from the NAICS sample is accumulated. Precautionary steps are taken to minimize nonsampling errors, but their magnitude is not directly measured.

Further information regarding the reliability of estimates can be found on the Internet on our web page at <http://www.census.gov/svsd/www/mwtsreliability.html>.

r Revised

1 Adjusted sales and inventories data shown in Table 1 are obtained by dividing the unadjusted data by the adjustment factors shown above for the corresponding group. Adjusted data for the totals are obtained by adding the durable and nondurable goods. Seasonal factors shown for the totals will provide an approximation of the adjusted estimates, but may show small differences from the published data.

Note: The seasonal factors shown have been computed based on monthly estimates through the current month preliminary estimates.
